The political and public discussion about our plastic consumption and the associated pollution of our landscape and the oceans in recent decades makes it clear that **sustainable and biodegradable materials** are necessary for the well-being of all mankind. In addition to our sustainable wood and PappArt products, we now have **a really new and revolutionary material** for a classic plastic article in the creative toy sector in our product portfolio.

NABBI® BioBeads ironing beads consist of certified and patented Biodolomer®, which is made from European rapeseed oil in Sweden. This material demonstrably reduces the CO2 in the atmosphere through sustainability and compostability and protects the environment through biodegradability without microplastics. This is proven by an LCA within EU LIFE15 ENV/SE/000315 and according to EN13432. The **NABBI® BioBeads** themselves are approved according to EN 71-3 and comply with the toy regulations.

NABBI® BioBeads are also made in Sweden. The important thing with a creative toy are bright colors, easy workability that is fun and many possible uses for great results. **NABBI® BioBeads** can be threaded, woven, glued and ironed. **Brand new** also processed in the **PhotoPearls® software** and become large, unique works of art.

NABBI® BioBeads are available in 35 colors and two mixes. There are also 9 motif plug-in panels that are also made of Biodolomer®.

PappArt – Truly sustainable – really sturdy – super light – perfect for many creative works.

The raw materials for PappArt are old newspapers, grey cardboard, packing paper and rice glue. Figures are made from strips of waste paper and are therefore as resource-saving as possible. The boxes are made of grey cardboard with a cover of wrapping paper. Grey cardboard is an unglued, one-sided, smooth, round-screen cardboard made of **100% recycled fibres**. The wrapping paper does not use fresh wood fibres and **requires less water and energy production process**.

A product can hardly be more sustainable and resource-saving. In addition, the **social aspect** is not to be neglected. Genuine handicraft instead of energy-intensive mass production, from which many families can live.

But where do PappArt figures actually come from and how are they produced? We travel with you to the Philippines to find out. The PappArt figures have a **great tradition** in the Philippines – they are available in many sizes and for many different purposes.

Our PappArt items are not produced in large factories there. They belong to the family, so to speak, because they are made there in the home. For this purpose, the families organise themselves for the production process on the veranda, in the garage or in a back room. Larger orders are realised in a village group.

The PappArt figures are made in various steps. For the figures, strips of paper cut by hand are glued to hand-carved wooden models with a home-made glue consisting only of rice starch and water. After drying, each piece is carefully cut open, removed from the mould and reassembled. Boxes or the blanks are cut or punched out of grey cardboard and glued together with packing paper using rice glue. Finally, each piece receives the final layer of brown wrapping paper that **makes the PappArt products so distinctive**.

Organic Swiss stone pine chips – A filling material from the good old days rediscovered.

Ideal as a traditional filling material for pillows, scented bags, cuddly toys, but also for aromatherapy.

Swiss stone pine chips spread a unique and natural scent throughout the room.

The natural filling in the pillow has a calming effect, helps with headaches and neck pain and promotes sleep.

In addition, the Swiss stone pine wood chips as a filling material are a good solution for people with mite allergies, as the mites keep their distance from the essential oils of Swiss stone pine.

Important information! Please be sure to observe!

Cover with kitchen paper for transport! After drying, cover with kitchen paper and iron dry – without steam – so that excess ink can be absorbed. Drying time at least 6 hours.
 The stamping ink is only suitable for stamping. When applied with a finger dabber and stencils, too much ink is applied to the base, which then dries very slowly or smears when brushed over it.
 For stencilling with stencils, a textile paint is much more suitable!
 For stencilling with children, we recommend our textile markers!
